CORSAIR GAMING

CUE PATCH NOTES
Version 1.11.85 – October 12th 2015

CUE 1.11.85 is the latest release for our RGB line of peripherals and contains a multitude of changes and enhancements.

Fixes / Improvements

- VOID USB headsets are now detected as a 7.1 Channel Surround Sound device in Windows. Users will be able to select 5.1 or 7.1 Channel Surround Sound Output in applications after the driver is updated through CUE.
- Resolved an issue with VOID headsets and CUE related to CPU resource usage.
- Resolved an issue that prevented solid lighting to be saved on all RGB Gaming Mice.
- Rain as a preset lighting pattern now lights up the L.Alt key properly.
- SABRE lighting zones will now properly come on after waking up from prolonged sleep.
- Resolved miscellaneous bugs and fixes.

Important Note

If you have updated your keyboard to **FW 1.20 or newer, software older than 1.5.108 will no longer be compatible.** Please ensure you always have the latest software available when updating the firmware to prevent incompatibility. Firmware updates are done through the software itself under Settings -> Device -> Update Firmware.

Keyboard Connectivity

Connecting via USB 3.0:   Use one connector (the one with the keyboard icon) when connecting via USB 3.0
Connecting via USB 2.0:   Use both connectors when using USB 2.0.*

* Plug in the connector with the two arrows icon first, and the connector with the keyboard icon second.
